

THE FERRYMAN

50 mm

One facilitated station | English | A4 | single-sided assembly

Carry. Remember. Return.

A complete physical workshop kit for the decided v0.3 rules. You are an apprentice carrier and guide. Any destination accepts any passenger.

Print plan

01	Print guide	1-2
02	24 soul cards	3-5
03	32 memory fronts + 24 backs	6-12
04	Route board + 3 play mats	13-16
05	Obols + status markers	17-18
06	Resources + facilitator trackers	19-22
07	Player + facilitator references	23-25
08	Event reveals + spoiler reference	26-28
09	Observation + feedback forms	29-30
10	Repeatable continuation sheets	31-36

Print pages 1-30 for the starter station. Pages 31-36 are a reusable next-cohort batch. Finite paper and token quantities do not limit the endless rules. Full kit: 36 A4 pages.

Prototype: physical printing, handling and human playtesting remain NOT_RUN. Rules and numerical defaults have not been balanced by this kit.

Print, cut and assemble

Printing choices do not add rules. Keep the event faces and spoiler sheet with the facilitator.

1 | Check scale

Use A4, actual size / 100%, single-sided. Turn off Fit, Shrink and borderless scaling. Measure the 50 mm line before cutting. Margins are at least 10 mm. Cards are 63 x 88 mm with 3 mm text safety.

2 | Prepare the station

Use paper or light card, scissors or a ruler/cutter, pencils, erasers and optional identical opaque sleeves. Place the route board, boat, shore/storage and memory mats on a table. Place resources and reference sheets nearby.

3 | Cut and sort

Cut on the fine card/token outlines. Soul cards are public and need no back. Sort C01-S01 through C01-S12, then C02-S01 through C02-S12. Keep further blank-cohort cards aside until assigned fresh IDs.

4 | Assemble memory cards

There are 32 starter fronts but at most 24 earned memories from 24 souls. Select only the earned Faint/Joined alternative per linked soul. Put its front with one identical printed memory back in an opaque sleeve, or glue onto equal opaque stock. Keep all fronts, thickness and reverse orientation alike.

5 | Keep reserves separate

Keep unearned memories and unused alternatives in RESERVE, never the draw/discard piles. At delivery, fill the destination and issue one memory per soul. Single-sided front + backing is sufficient. Duplex is optional and untested.

6 | Continue and reset

Print pages 31-36 for each further 12-template cohort. Assign the same new cohort number to its souls, links, opponents and memory sources. Never reuse a delivered, waiting or active instance within the run. Add tally/log sheets whenever space runs out.

7 | Physical check before people play

Check one 63 x 88 mm card, 50 mm calibration, safe cuts, visible rules, equal opaque memory backs, pencil erasability, grayscale symbols and table reach. Complete the checklist in VALIDATION.md. No print or rehearsal result is prefilled.
