

Player quick reference

50 mm

Carrier and guide, not judge. Wishes are advisory. The run continues through cycles until failure.

1 | Prepare at shore

Start: 2 light (cap 6), 2 obols, hull 3, 0 reprimands, no memories. Fill shore to five in fixed order. Board within four seats. Take anyone to any destination before returning.

2 | Choose and survive

A crossing is one edge. Use unvisited stops; visit a destination before returning. Check final fog AND hull damage. Fog greater than light fails. Exactly zero light survives. Rocky damage follows fog; hull 0 fails before rewards.

3 | Deliver, then remember

At a destination, confirm one selection, including none. Others continue aboard. Each delivered soul gives its printed reward plus 1 light for a matched wish, and one memory. A mismatch has no penalty. Haven gives 1 light and unloads nobody.

4 | Memories are free

After rewards and events, draw to three once per stop. Keep unplayed cards. Shuffle discard when draw is empty. Play at most one before the next crossing, then discard. No second draw at that stop.

5 | Return is the checkpoint

Only return changes anger. Waiting snapshot: +1 normal, plus +1 for separation. P blocks only normal anger. At 3+, form a wraith and add 1 reprimand. Each undelivered passenger adds 1 reprimand and returns with existing anger.

6 | Settle and begin again

Check dismissal at 3 reprimands before quotas. Every third completed cycle, automatically pay 2 obols if affordable; otherwise keep coins and add 1 reprimand, no debt. Check dismissal again. Survivors recover 1 light, clear marks, refill toward five, then draw once.

Actions: calm at shore, 1 obol, once per cycle, prevents one normal anger increase. Repair at shore/haven, 1 obol per hull to 3, repeatable. Release at any stop in preparation, 2 light per wraith, remove it and 1 reprimand (min 0), repeat if affordable.

Linked-card *: matching partners delivered together in one action each earn Joined, otherwise Faint. No later replacement. W = waiting snapshot; S = split; P = normal-anger protection.

Facilitator | crossings & arrivals

50 mm

Read the separate event trigger sheet privately. Keep unused event faces covered unless the player opens the spoiler reference.

Setup and identities

Reset the run ledger and event flags. Start cycle 1, completed cycles 0; next quota is after completed cycle 3. Start at 2 light, 2 obols, hull 3, 0 reprimands. All memory piles empty. Fill to five from C01-S01 onward. Mark setup draw completed even though empty.

Shore departure

Confirm loading within four seats; empty departures are legal. Only then capture W waiting IDs and S separated partners. Boarding changes before departure do not create S or refund a paid action/card. Calming costs 1 obol once per cycle, only at shore; an already protected target is ineligible. P expires at return even if unused.

Calculate the upcoming edge

Final fog = $\max(0, \text{effective base} + \text{cycle modifier} + \text{active wraiths} + \text{opposing-pair conflicts} - \text{passenger protection} - \text{memory protection})$. For a rocky edge, effective base = $\max(0, \text{base} - 1)$. Check final fog against light, then subtract 1 hull for rocks. Failure stops before arrival.

Passengers and wishes

Each same-cohort Red/Blue pair aboard adds 1 fog unless canceled. Each Poet with at least two other souls aboard gives 1 protection. A Keeper alone gives 1. Count souls, not seats. Flame reward = 1 light; coin = 1 obol; matched wish = +1 light per soul, capped at 6.

Arrival order

Save the aboard-on-entry IDs. At a destination, choose one delivery selection, including none. Award rewards, wishes and one memory per soul. At haven, give its once-per-cycle 1 light instead. Resolve matching events E01-E04 in order, once each per run. Then draw to three once and prepare.

Memory handling

Add new memories to draw-pile bottom in cohort / soul-ID order. Preserve hand; shuffle discard only when the draw pile empties. Play one free card, discard it, and do not draw again at that stop. Reset play allowance only after a successful crossing. Recollection/Joined can mark a waiting shore soul from any stop; marks do not stack or stop S.

Facilitator | return & reset

50 mm

A failed return performs no cycle-end actions. No optional actions can interrupt the following checks.

1. Survive the return using the wraiths already active. Return has base fog 0, no cycle modifier and no rocky variant; passenger effects and wraiths still count.
2. Count the completed cycle. Resolve W waiting anger: +1 normal unless P, plus +1 if S. At anger 3+, transform, move the source card to active wraiths and add 1 reprimand per transformation.
3. Return every undelivered passenger to shore, keeping its old anger and adding 1 reprimand each. These passengers gain no waiting anger for this cycle. Keep overflow. Check dismissal now; at 3 reprimands stop before quota or recovery.
4. If completed cycles is divisible by 3, pay 2 obols automatically when affordable. Otherwise retain coins, mark one missed quota and add 1 reprimand, with no debt. Check dismissal again.
5. Survivors clear cycle marks, recover 1 light (cap 6), increment current cycle and reset visited stops. Refill toward five only now, using fresh cohorts as needed. New souls start at zero anger and get none for the finished cycle. Draw memories to three once, then prepare.

Later cycles and repeatable care

Cycles 1-2: ordinary edges. From 3: optional rocky non-return variants, base fog -1 (min 0) and 1 hull damage. From 5: +1 fog on non-return edges, including haven. From 6: favor Elysium, then Asphodel, then Tartarus, repeating; entry to that destination ignores only the +1 cycle modifier.

Repair at shore/haven costs 1 obol for 1 hull, repeat to hull 3. At any stop in preparation, release one wraith for 2 light and reduce reprimands by 1 (min 0); repeat if affordable, even down to zero light. No action rescues an ended run.

RESET: separate all souls by original source order; remove W/S/P, anger, visits and reconciliations; return every memory to reserve; clear run flags and totals; restore setup values. Keep discovery notes only if desired, separate from run state. A timed workshop stop is not a victory.
